04 Q&A

Slide 08

Milestone Summary

What we built

- A B2B client portal to configure infrastructure
- A modular tech kit integrated into multiple pod designs
- A rider app flow connected to real-world system state
- An AI/ML layer for prediction and system insight
- An IoT prototype sending live signals into the system
- A Unity simulation to preview and test behavior before deployment

Milestone 2:

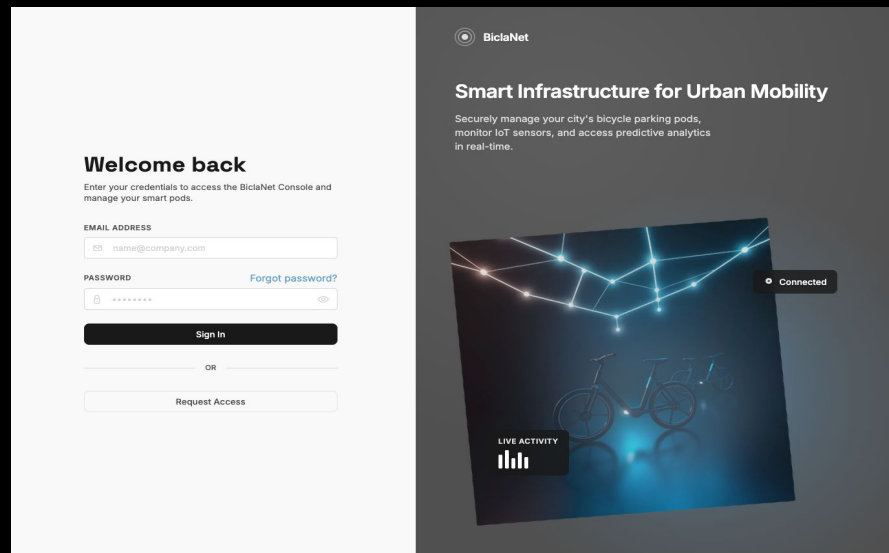

From Concept to Working System

What we focused on

This milestone was about moving beyond concept and validating BiciNet as a *working system*.

What this proves

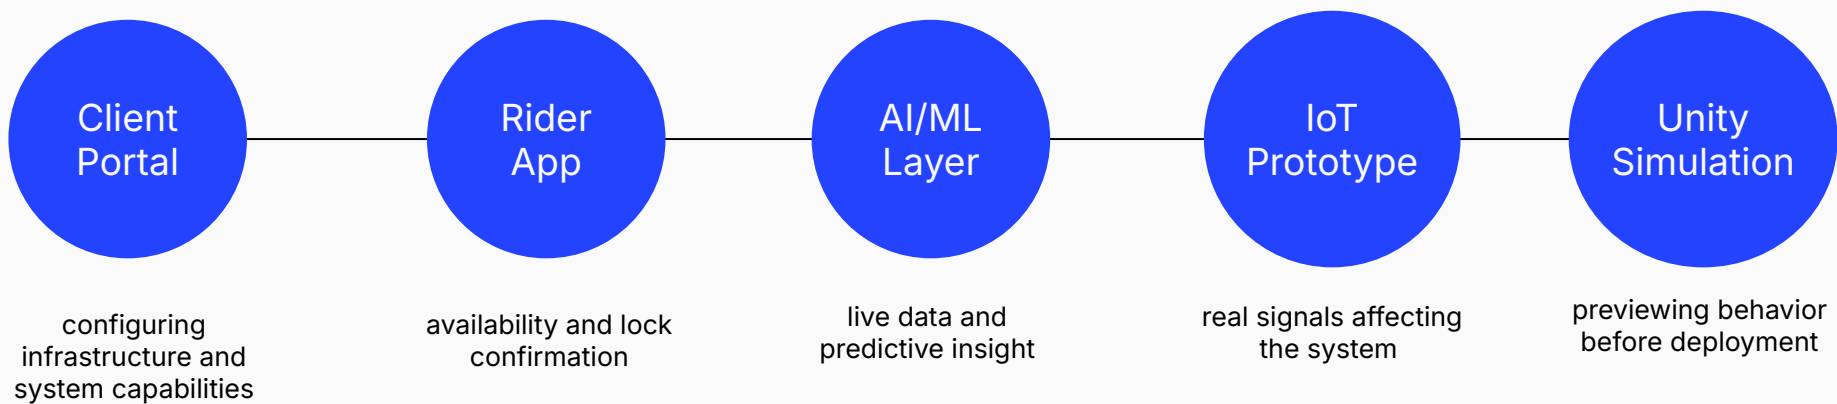

BiciNet is not a single product, it's a flexible platform that adapts to different designs while keeping the system consistent.

Live Demo

Showing how BiclaNet works as a connected system

Looking Ahead: Iterate and refine

- Refine system logic
- User testing
- Improve client/app designs based on User testing
- Improve AI/ML models with longer-term usage data
- Improve the physical prototype
- Connect all of our work

Thank you!
